NRDC-1	BayREN	Com	General (no tracker)	<ul style="list-style-type: none"> • Does BayREN have data on rent vs. own commercial? • Same comment as Res, to cite barriers etc. • Include comparison of accounts to consumption if available. • Define specialty (e.g., nails? Flowers?) • P.3.6 – metric #2 is compounded, will need to separate S2a and S2b • P.3.11 – What is the category “flex” • P.3.11 – per my comment on 11/2 – clarify this is all PG&E territory and cite to them • P.3.12 - You note whole building is hard to reach, but I thought HTR has a very specific definition in the Policy Manual based on location and language spoken by customers. It is certainly a challenging approach to capturing EE, but not sure it should be described as HTR (unless the link can be made to the definition). • P.3.12 – link to the final resolution • Same comment as in RES. It’s a bit challenging to go back and forth in the document to see what strategies and tactics are being used. Suggest exploring a different table configuration to make it easier for the reader. • For deep retrofits, is that overlapping with PG&E’s program? Or is the size of eligible buildings different? • NRDC looks forward to seeing the other parts of the checklist (e.g., EMV summary, summary of differences from last cycle, etc.)
