- LCC Methodologies

For example:

- fuel switching considerations
- Furnaces: Support improvements to no-new-standards case (consumer choice models, etc)
- Furnaces: support improved explanations, justification and transparency for assumptions and input data; possibly support use a non-proprietary and easier to understand alternative to Crystal Ball;
- Multiple: Use TDV energy, or at least include peak power considerations, or power cost broken down by state. As is marginal electricity cost utilized by DOE skews results for California
