

# Recap of DEER Peak Ad Hoc Workshop #1 and summary of stakeholder responses on the implementation timeline for a possible change to DEER Peak

1. Need for alignment of DEER Peak definitional change and CPUC goal setting
2. Unanimous agreement that adoption of a new DEER peak by January 1, 2019, is not possible. January 1, 2020, or January 1, 2022, are feasible and could allow for alignment with the CPUC goal setting process.
3. Strong agreement that preparations for the DEER peak shift should begin immediately.
  - Meeting a January 2020 deadline will require near term updates to goals, workpapers, etc., which will require prioritization and direction from the CPUC.
4. Request for clarity and stability for the DEER peak definition changes - a stable definition, clear timelines, clear values, and communication are needed to provide direction and reduce risk to stakeholders
